

- Read on your own and study from the textbook
- Pay lots of attention even if no one around you does.
- Read the textbook!
- Read the textbook
- Try every single classwork problem on your own. If you don't get it, ask for help but then redo them on your own. The classwork problems are very similar to the questions on the AP and the test.
- It's all concepts
- One piece of advice that I would give a student taking this class next year is to really absorb the material because one thing leads to another.
- Take it into your own hands if you want to do well. Unless you're Niko.
- READ THE BOOK AND WATCH THE VIDEOS
- Open your textbook
- BE READY TO CRY AND LEARN FROM THE BOOK BY YOURSELF.
- Read the book when its assigned instead of pushing it back.
- Be forewarned. This class will be fast-paced and will require you much work. A lot of work to where you must speak out loud in front of the class. Take this class as if you were in a community college class.
- Do the class work or you're gonna do bad
- Read the material and study the fundamentals and concepts
- Listen to Mrs. Dimas even when others aren't
- Have a good work ethic! The work load in Freshmen and Sophomore was so light and easy that I got into the habit of doing homework during break and lunch and barely studying. I carried this philosophy into Junior year and this class, which was a very bad mistake.
- Pay attention
- Start your homework as soon as possible because procrastination affects this class the most.
- Be prepared to work with concepts a lot and be proficient in math
- Work ahead as much as possible!
- Actually read the book and don't copy video notes. Also, ask questions in class because it's harder to learn during block period scheduling where classes don't meet every day
- DON'T PROCRASTINATE, DO ALL THE WORK ON TIME, DO SOME EVERY DAY SO YOU DON'T HAVE TO DO A BUNCH AT ONCE.
- Ask questions
- Leave before its too late.
- WebAssign is tricky. Don't wait until last day to turn in hwk
- Read the book and watch the videos
- Don't expect an A
- AP is hard, good luck.
- Read the book
- Read the book
- Come in for help and do test corrections ALWAYS
- Ask questions about the class work before taking the test
- Do the assignments... Anyone can tell you this, but you really don't learn well by copying others or online
- Study concepts and remember when to use the formulas
- Watch the videos and do your work@!!!!!!!!!!!!!!
- Study the concepts to the max. Prepare to get receive trick Questions, and WebAssign is a lot harder than the ap physics FRQs itself
- If you need extra help, do not just rely on the video notes; try going more in depth into the textbook to try and get a better grasp for the material.
- Don't take this class unless you are prepared
- Study hard

- Make sure to do WebAssign at least 3 days before the due date so you can ask questions and study them.
- Don't try so hard
- Read the book.
- Study! Actually do the reading! it would have helped me a lot
- Read the book
